Sintered brake pads for all models of off road & street M/Cycles, ATV's and Scooters.

Many pad material compound choices for recreational and street applications.

Optimal braking characteristics.

Permanent brake effect.

Long durability.

The Race Pad models come standardly with a heat insulator on the backing plate.

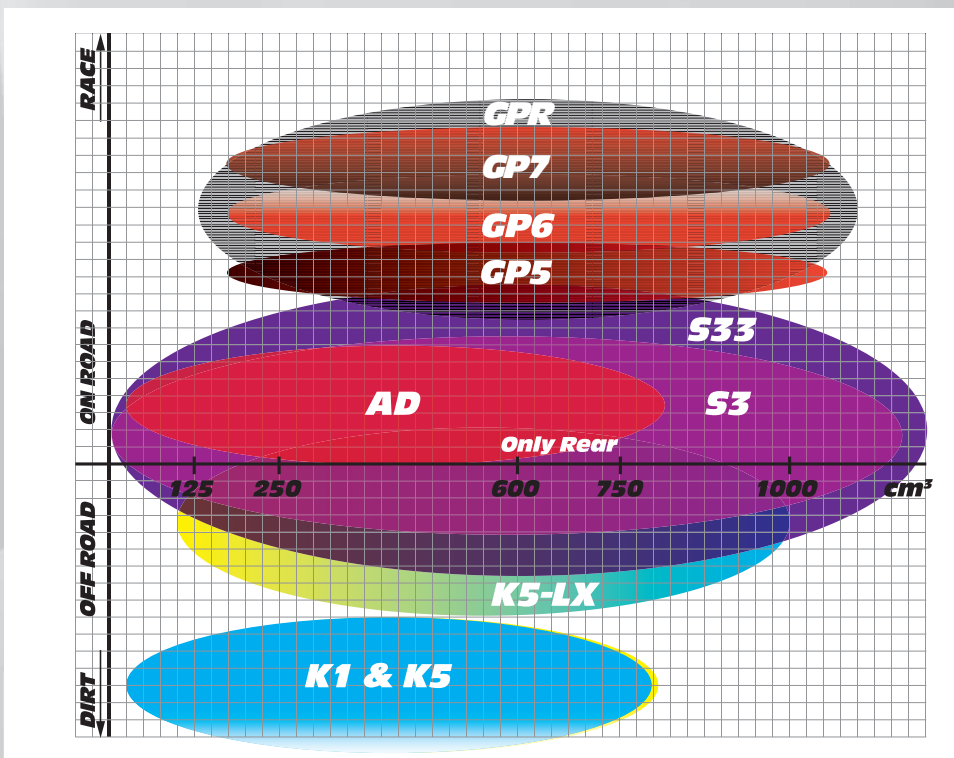

The Pad friction material is safe for the environment.

Friction materials

AD, S3, S33 are certified by German Institute TÜV Saarland.

Material Chart

Installation Instructions

- Verify the correct selection of the brake pads at the dealer's in accordance with the bike type and manufacturing year of your bike.
- Replace the brake pads as soon as the braking surface thickness has dropped below 2 mm.
- Protect the brake pad surfaces against grease, oil and other chemical substances.
- Clean and degrease the brake wheels prior to installation of new brake pads.
- Replace damaged brake wheels reducing the braking effect and, at the same time, shortening the lifetime of the brake pads.
- Install the brake pads directing their braking surfaces towards the brake wheel. Having completed the installation, check correct mounting and securing of the pads.
- Entrust a specialized servicing shop with the installation of brake pads when lacking experience.
- TÜV Saarland automobil GmbH - TÜV Rheinland Group certified.

Running-In New Brake Pads

The correct way of running-in newly installed brake pads is the prerequisite for their long lifetime and for a reliable braking effect of the bike brakes. If possible, do not provide your motorbike with new brake wheels during running-in new brake pads.

Cleaning of the brake wheels using abrasive paper is recommended in case of their previous use with another lining material. After the installation of the brake pads, their fitting must be free and without excessive clamping in the brake mount.

Having revved up your bike, brake several times at lower speeds to achieve a contact surface of 80 to 90 per cent of the total area of the active brake pad surface between the brake wheel and the pads. Then brake the bike several times at higher speeds and allow the brake pad lining to get cooled while driving. After this running-in procedure, the brake pads may be normally used.

Dear Friends, Dear Commercial Partners,

Spacek Product commenced operations in 1991, manufacturing sintered disc brake pads for a wide range of both road and off-road motorcycle model applications, utilising „GOLDfren“ as our chosen product brand logo. In the following 29 years since our commencement of manufacturing operations, we have today in 2020 become one of the largest aftermarket suppliers to world markets in this product sector (M/Cycle disc brake pads).

During this period of evolution and growth in our commercial operations; as a result of continuous heavy investment in R & D, we have successfully expanded our product range of sintered brake pads to incorporate aftermarket product to service the Aeronautical, Heavy-Duty Industrial Logistics Equipment (Lifting Cranes), Automotive Motorsport, Mountain Bike, and M/Cycle Motorsport Sidecar, commercial sales sectors.

To continue to endeavour to meet our customers evolving demands in the intensely competitive and critical commercial world we all operate in, Spacek Product continues to invest heavily in product R & D to maintain development of „new generation“ products, and to maintain our position at the technological forefront of the Sintered Friction Braking Industry. By basing our manufacturing facility in the Czech Republic which is world renowned for its engineering excellence since some 100 years past, we are able to offer our customers the perfect combination of world leading technology combined with a very competitive production cost base so that the customer and the consumer can purchase the best quality product at the most competitive price – with complete confidence in the performance, durability, and reliability of the product.

We commenced production in 2000 of a complete range of aftermarket Street and Motocross Disc Brake Rotors, applicable to most Japanese and European Sport and Touring M/Cycles, Scooters, ATV M/Cycles, and Motocross models. These Rotors are available in OEM round configuration, and in several other specialised aesthetic style configurations.

One of our current priorities in our manufacturing program is to introduce graphic design elements to differentiate and protect our GOLDfren branded product range from plagiarism from inferior product brands attempting to (without our authority) capitalise on our heavy investment in R & D and product promotion. It is our absolute priority to protect and to add value to our GOLDfren product reputation, to support and promote our customers marketing programs in their home markets throughout the world.

Dear friends, Dear commercial partners; we thank you for your current and past support , and we are sure that you continue to value our efforts to offer you the best possible product technology and pricing that your market demands, and we are confident that you will value our GOLDfren product range as a „priority and preferred“ product group in your inventory and marketing strategies.

Yours Truly, Mr. Stanislav (Stan) Spacek

Managing Director / Spacek Product

R road, silnice
HD Harley Davidson

AD material

Material operating parameters:

Specific pressure: $P < 5.0 \text{ Mpa}$
Sliding speed: $V < 40 \text{ m.s}^{-1}$
Constant maximum temp.: 450°C
Short time maximum temp.: 700°C

Notes:

- Replacement of brake pads should be done in dry clean conditions.
- If the friction material comes into contact with oil or brake fluid and the liquid soaks into the pores of the friction material, a catastrophic fall in friction coefficient (braking performance) could occur.
- Braking performance is significantly influenced by the quality of the braking surface of the disc, by the age and quality of the brake fluid, and by the correct choice of complementary friction pad material.

K1 material

Material operating parameters:

Specific pressure: $P < 3.5 \text{ Mpa}$
Sliding speed: $V < 45 \text{ m.s}^{-1}$
Constant maximum temp.: 450°C
Short time maximum temp.: 800°C

Notes:

- Replacement of brake pads should be done in dry clean conditions.
- If the friction material comes into contact with oil or brake fluid and the liquid soaks into the pores of the friction material, a catastrophic fall in friction coefficient (braking performance) could occur.
- Braking performance is significantly influenced by the quality of the braking surface of the disc, by the age and quality of the brake fluid, and by the correct choice of complementary friction pad material.
- To achieve perfect braking effect we recommend using the same brand of brake wheels and hoses as that of the brake lining, i.e. GOLDfren®, because of excellent common friction properties.

K5 material

Material operating parameters:

Specific pressure: $P < 2.0 \text{ Mpa}$
Sliding speed: $V < 20 \text{ m.s}^{-1}$
Constant maximum temp.: 500°C
Short time maximum temp.: 750°C

Notes:

- Replacement of brake pads should be done in dry clean conditions, and preferably by a professionally qualified person. If the friction material comes into contact with oil or brake fluid and the liquid soaks into the pores of the friction material, a catastrophic fall in friction coefficient (braking performance) could occur.
- Braking performance is significantly influenced by the quality of the braking surface of the disc, by the age and quality of the brake fluid, and by the correct choice of complementary friction pad material.
- To achieve perfect braking effect we recommend using the same brand of brake wheels and hoses as that of the brake lining, i.e. GOLDfren®, because of excellent common friction properties.

Characteristics:

Metal-ceramic, typical iron friction material designed for both dry and wet friction. Finer additives compared with K1 material are added to the basic iron compound.

„AD“ friction material is lead and asbestos free.

Features:

- High static friction coefficient.
- Good abrasive resistance.
- High braking power up to 500°C .
- Very good binding strength between copper lined steel base plate and friction layer
- Wearing rate by 20% lower comparing to competitive sintered products of its category for common use
- Low abrasive interaction with the brake rotor material.
- Three(3) times +/- longer operational life compared to organic and Kevlar composite materials.

Range of Application:

Material is suitable for dry and wet conditions for road and off-road motorcycles; in road motorcycle application suited to front or/and rear brake while for off-roads we recommend using it for front brake.

The material is designed for common road riding application.

Characteristics:

Metal-ceramic friction material designed for friction in dry and wet conditions is produced applying advanced powder metallurgy method, which is a leader in the sintered process field. Metal-ceramic material K1 is a bronze-graphite friction material designed for wet friction applications. Coarser non-metallic friction additives are spread evenly in the base fine bronze body.

Features:

- High static friction coefficient.
- High abrasive resistance.
- High braking power up to 450°C . (Max. 750°C)
- Low abrasive interaction with the brake rotor material.
- Three(3) times +/- longer operational life compared to organic and Kevlar composite materials.

Range of Application:

It suits on off-road motorcycles of a high service life in heavy duty drive surface conditions, e.g. sand, mud.

- For a period of higher temperatures we recommend to substitute it with K5 material
- It has a self-cleaning effect in muddy conditions
- Suitable for rear brake lining
- We do not recommend using K1 on the front brakes of road motorcycles.

A metal-ceramic friction material comprising of a very sophisticated bronze-graphite full-metal mixture formulation that is uniformly dispersed with very fine grade metal friction particles. It is suitable for both dry and wet friction applications.

Characteristics:

Metal-ceramic bronze-graphite friction material is an all-metal mixture designed for applications on both dry and wet conditions. Finer metallic friction additives are spread evenly in the base fine bronze body.

Features:

- High static friction coefficient.
- Good abrasive resistance, and self cleaning capability.
- High braking power up to 500°C . (750°C . in bursts).
- Low abrasive interaction with the brake rotor material.
- Three(3) times +/- longer operational life compared to organic and Kevlar composite materials.

„K5“ friction material is lead and asbestos free.

Range of Application:

This material was developed for OFF-ROAD races because it features long service life on heavy-duty drive tracks.

- a) hot weather / dry - only rear brake
- b) hard terrain - front and rear brake

The sintered materials feature self-cleaning effect.

The material may be used on rear brake of road racing motorcycles.

Characteristics:

Metal-ceramic friction material designed for friction in dry and wet conditions is produced applying advanced powder metallurgy method, which is a leader in the sintered process field. Metal-ceramic material S3 is a bronze-graphite friction material designed for wet friction applications. Coarser non-metallic friction additives are spread evenly in the base fine bronze body.

Characteristics:

Sintered metal-ceramic friction material is an all-metal compound designed for friction in both wet and dry conditions.

The basic fine structure is filled with evenly distributed finer metal friction admixtures.

This product is lead-free and asbestos-free friction material.

Designed for ambitious and first-class riders who demand excellent quality to give a truly sports edge to their racing performance.

Material S33 is developed especially for applications during off-road motorbike races.

Characteristics:

Sintered metal-ceramic friction material is an all-metal compound designed for friction in both wet and dry conditions.

The basic fine structure is filled with evenly distributed finer metal friction admixtures.

This product is lead-free and asbestos-free friction material.

Designed for clients that demand high braking effect and high friction coefficient.

Features:

- Very high static friction coefficient.
- Minimal difference between wet and dry braking performance.
- Good abrasive resistance.
- High braking power up to 450° C. (Max. 800° C)
- Low abrasive interaction with the brake rotor material.
- Longer life compared to organic and kevlar composite materials.

Range of Application:

- Material is suitable for dry and wet conditions for road/ and off-road motorcycles; in road motorcycle application is suitable for both front/and rear brake while for off-roads we recommend using it for front brake

Scope of application:

- The metal-ceramic material can undergo friction in both wet and dry conditions. It is manufactured by means of a progressive method of powder metallurgy.
- These materials gradually gain a leading position among sintered metals
- Excellent service life and high friction coefficient makes this material an ideal choice for world off-road championships.
- These sintered materials are characterized with self-cleaning effects.
- This material is used in world championship races by motocross and enduro riders.
- There is front brake version and rear brake version of S33 off-road material. Manufacturer's recommendation is labeled on the packing („only for rear brake“ or „only for front brake“)

Characteristic features:

- High static friction coefficient across the whole scope of operating condition
- Sufficient resistance to abrasion
- Thermal stability up to do 600°C, and even up to 850°C over a short term
- Low aggressiveness in contact with the brake disc

Scope of application:

- The metal-ceramic material can undergo friction in both wet and dry conditions. It is manufactured by means of a progressive method of powder metallurgy.
- These materials gradually gain a leading position among sintered metals.
- These sintered materials are characterized with self-cleaning effects.
- This material can be used in world championship races.
- There is front brake version and rear brake version of S33 street material. Manufacturer's recommendation is labeled on the packing („only for rear brake“ or „only for front brake“)

Characteristic features:

- High static friction coefficient across the whole scope of operating conditions
- Sufficient resistance to abrasion
- Thermal stability up to do 600°C, and even up to 850°C over a short term
- Low aggressiveness in contact with the brake disc
- Environment-friendly
- Use of thermal insulation on the rear side of brake pads.

S3 material

Material operating parameters:

- Specific pressure: $p < 3.0 \text{ Mpa}$
- Sliding speed: $v < 45 \text{ m.s}^{-1}$
- Constant maximum temp.: 450°C
- Short time maximum temp.: 800°C

Notes:

- Replacement of brake pads should be done in dry clean conditions. If the friction material comes into contact with oil or brake fluid and the liquid soaks into the pores of the friction material, a disastrous fall in friction coefficient (braking performance) could occur.
- Braking performance is significantly influenced by the quality of the braking surface of the disc, by the age and quality of the brake fluid, and by the right choice of complementary friction pad material.

S33 material off-road

- Long service life
- Environmentally friendly
- Use of thermal insulation on the back side of brake pads

Material operating parameters:

- Specific pressure: $p < 5 \text{ Mpa}$
- Sliding speed: $v < 20 \text{ m/s}^{-1}$
- Max. stable temperature: 600°C
- Short-term temperature: 850°C
- Counter-surfaces: steel rotors

Notes:

- These brake band linings should be replaced in specialized service shops.
- Prevent these types of material from contact with oil which could be absorbed by the pores of the material, thus causing a decrease in the friction coefficient.
- The coefficient of specific abrasion and temperature is affected by testing conditions.
- Brake with the products developed by GOLDfren®.

Braking effects are affected by a range of factors:

The condition and age of the brake liquid and its quantity; the quality of the material and the condition of the brake disc as well as the appropriate choice of material selected with regard to a desired braking effect.

S33 material street

Material operating parameters:

- Specific pressure: $p < 5 \text{ Mpa}$
- Sliding speed: $v < 20 \text{ m/s}^{-1}$
- Max. stable temperature: 600°C
- Short-term temperature: 850°C
- Counter-surfaces: steel rotors

Notes:

- These brake linings should be replaced in specialized service shops.
- Prevent these types of material from contact with oil which could be absorbed by the pores of the material, thus causing a decrease in the friction coefficient.
- The coefficient of specific abrasion and temperature is affected by testing conditions.
- Brake with the products developed by GOLDfren®.

Braking effects are affected by a range of factors:

The condition and age of the brake liquid and its quantity; the quality of the material and the condition of the brake disc as well as the appropriate choice of material selected with regard to a desired braking effect.

Characteristics:

A sophisticated metal-ceramic formulation for racing use, GP5 material is produced by „Progressive Powder Technology“ - a leader in the field of sintered technologies.

This compound material is specially formulated for racing use.

This material is dedicated to the street racing. Use specifically for the front brake!

Features:

- Very high static friction coefficient
- Low abrasive interaction with the brake rotor material
- Specially modified braking surface
- Application of heat shield on the back side
- Minimal difference between wet and dry braking performance
- Good abrasive resistance
- High braking power up to 550°C (max. 800°C)
- The sintered friction material is soldered to the copper coated backing plate, so separation (which can happen with organics material) is virtually eliminated as a failure risk.
- Continuous braking effect

GP5 is dedicated to front brake only!

GP5 material

Material operating parameters:

- Specific pressure: $p < 5,0 \text{ Mpa}$
- Sliding speed: $V < 30 \text{ m.s}^{-1}$
- Constant maximum temp.: 550°C
- Short time maximum temp.: 800°C
- Counter-surface: steel discs

Notes:

- Replacement of brake pads should be done in dry clean conditions. If the friction material comes into contact with oil or brake fluid and the liquid soaks into the pores of the friction material, a catastrophic fall in friction coefficient (braking performance) could occur.
- Braking performance is significantly influenced by the quality of the braking surface of the disc, by the age and quality of the brake fluid, and by the correct choice of complementary friction pad material.
- To achieve perfect braking effect we recommend using the same brand of brake wheels and hoses as that of brake lining, i.e. GOLDfren®, because of excellent common friction properties.
- Brake with GOLDfren® products!

Characteristics:

Material GP 6 is made on the basis of sintered metal-ceramic friction materials by means of powder metallurgy. A high, stable friction coefficient is the characteristic feature of this production technology with a minimal degree of abrasion.

This material is designed only for applications in road motorcycle races.

It is recommended to apply this material exclusively onto the front brake.

Features:

- Very high static friction coefficient
- Low tendency to abrasion in contact with the material of the brake disc
- Special finish of the braking surface
- Application of thermal insulation (removable stainless insulator) on the rear side of the brake pad
- Minimal difference between braking performance in dry and wet conditions
- Good resistance to abrasion
- High efficiency of brakes up to 650°C (max. 800°C)
- Sintered friction material is soldered onto the rear cover-coated plate; therefore the risk of a failure caused by its separation (which can happen with organic materials) is almost excluded.
- Permanent braking effect

GP6 is dedicated to front brake only!

GP6 material

Material operating parameters:

- Specific pressure: $p < 5,0 \text{ Mpa}$
- Sliding speed: $V < 30 \text{ m.s}^{-1}$
- Constant maximum temp.: 650°C
- Short time maximum temp.: 800°C
- Counter-surface: steel discs

Notes:

- Brake pads should be replaced in a dry and clean environment. If the material becomes loose and comes into contact with oil or brake fluid and the liquid percolates the pores of the friction material, the friction coefficient (braking performance) can drop drastically.
- Braking performance is substantially influenced by the braking area of the disc, by the age and quantity of the brake fluid and by the appropriate choice of the additional material of the brake discs.
- Brake with GOLDfren® products!

Characteristics:

Brand new GP7 material is optimal for speed track racing use. It was formulated on the basis of sintered metal-ceramic friction materials by means of powder metallurgy. The most characteristic feature of this production technology is the high and stable friction coefficient.

This material is designed for use in road motorcycle races only!

Features:

- Very high static friction coefficient
- Low abrasive interaction with the brake rotor material
- Special braking surface modification
- A stainless-steel heat shield for thermal isolation fitted on the back side of the brake pad
- Minimal difference between braking performance in dry and wet conditions
- High quality abrasive resistance
- High braking power up to 660°C (max. 830°C)
- The sintered friction material is soldered to the copper coated backing plate, so separation (which can happen with organic material) is virtually eliminated as a failure risk.

GP7 is dedicated to front brake only!

GP7 material

Material operating parameters:

- Specific pressure: P < 5,1 Mpa
- Sliding speed: V < 30 m.s⁻¹
- Constant maximum temp.:660 °C
- Short time maximum temp.:830 °C
- Counter-surface:steel discs

Notes:

- Replacement of brake pads should be done in dry and clean conditions. If the friction material comes into contact with oil or brake fluid and the liquid soaks into the pores of the friction material, a catastrophic drop in friction coefficient (braking performance) could occur.
- Braking performance is significantly influenced by the area of the braking surface of the rotor, by the age and volume of the brake fluid, and by the correct choice of complementary friction pad material.
- To achieve optimal brake performance we recommend using brake rotors and hoses GOLDfren®, because of the design integrity of the related components.
- Brake with GOLDfren® products!

Characteristics:

Brand new material is optimal for speed track racing use. It was formulated on the basis of sintered metal-ceramic friction materials by means of powder metallurgy.

The most characteristic feature of this production technology is the high and stable friction coefficient.

This material is designed for use in road motorcycle races only!
